

Panasonic

LCD Projector Commercial Use

Operating Instructions

ENGLISH

Model No. PT-L730NTE

Before operating this product, please read the instructions carefully and save this manual for future use.

Dear Panasonic Customer:

This instruction booklet provides all the necessary operating information that you might require. We hope it will help you to get the most performance out of your new product, and that you will be pleased with your Panasonic LCD projector.

The serial number of your product may be found on its back. You should note it in the space provided below and retain this booklet in case service is required.

Model number: **PT-L730NTE**

Serial number:

IMPORTANT SAFETY NOTICE

WARNING: THIS APPARATUS MUST BE EARTHED.

WARNING: To prevent damage which may result in fire or shock hazard, do not expose this appliance to rain or moisture.

Machine Noise Information Ordinance 3. GSGV, January 18, 1991: The sound pressure level at the operator position is equal or less than 70 dB (A) according to ISO 7779.

WARNING:

- 1) Remove the plug from the wall outlet when this unit is not in use for a prolonged period of time.
- 2) To prevent electric shock, do not remove cover. No user serviceable parts inside. Refer servicing to qualified service personnel.
- 3) Do not remove the earthing pin on the power plug. This apparatus is equipped with a three prong earthing-type power plug. This plug will only fit an earthing-type power outlet. This is a safety feature. If you are unable to insert the plug into the outlet, contact an electrician. Do not defeat the purpose of the earthing plug.

IMPORTANT: THE MOULDED PLUG (U.K. only)

FOR YOUR SAFETY, PLEASE READ THE FOLLOWING TEXT CAREFULLY.

This appliance is supplied with a moulded three pin mains plug for your safety and convenience. A 13 amp fuse is fitted in this plug. Should the fuse need to be replaced, please ensure that the replacement fuse has a rating of 13 amps and that it is approved by ASTA or BSI to BS1362.

Check for the ASTA mark  or the BSI mark  on the body of the fuse.

If the plug contains a removable fuse cover, you must ensure that it is refitted when the fuse is replaced. If you lose the fuse cover, the plug must not be used until a replacement cover is obtained. A replacement fuse cover can be purchased from an Authorised Service Centre.

If the fitted moulded plug is unsuitable for the socket outlet in your home, then the fuse should be removed and the plug cut off and disposed of safely. There is a danger of severe electrical shock if the cut off plug is inserted into any 13 amp socket.

If a new plug is to be fitted, please observe the wiring code as shown below. If in any doubt, please consult a qualified electrician.

WARNING: — THIS APPLIANCE MUST BE EARTHED.

IMPORTANT: — The wires in this mains lead are coloured in accordance with the following code: —

Green-and-Yellow:	Earth
Blue:	Neutral
Brown:	Live

As the colours of the wire in the mains lead of this appliance may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows.

The wire which is coloured GREEN-AND-YELLOW must be connected to the terminal in the plug which is marked with the letter E or by the Earth symbol  or coloured GREEN or GREEN-AND-YELLOW.

The wire which is coloured BLUE must be connected to the terminal in the plug which is marked with the letter N or coloured BLACK.

The wire which is coloured BROWN must be connected to the terminal in the plug which is marked with the letter L or coloured RED.

How to replace the fuse. Open the fuse compartment with a screwdriver and replace the fuse.

Precautions with regard to safety

WARNING

If a problem occurs (such as no image or no sound) or if you notice smoke or a strange smell coming from the projector, turn off the power and disconnect the power cord from the wall outlet.

- Do not continue to use the projector in such cases, otherwise fire or electric shocks could result.
- Check that no more smoke is coming out, and then contact an Authorised Service Centre for repairs.
- Do not attempt to repair the projector yourself, as this can be dangerous.

Do not install this projector in a place which is not strong enough to take the full weight of the projector.

- If the installation location is not strong enough, it may fall down or tip over, and severe injury or damage could result.

Installation work (such as ceiling suspension) should only be carried out by a qualified technician.

- If installation is not carried out correctly, there is the danger that injury or electric shocks may occur.

If foreign objects or water get inside the projector, or if the projector is dropped or the cabinet is broken, turn off the power and disconnect the power cord from the wall outlet.

- Continued use of the projector in this condition may result in fire or electric shocks.
- Contact an Authorised Service Centre for repairs.

Do not overload the wall outlet.

- If the power supply is overloaded (for example, by using too many adapters), overheating may occur and fire may result.

Do not remove the cover or modify it in any way.

- High voltages which can cause fire or electric shocks are present inside the projector.
- For any inspection, adjustment and repair work, please contact an Authorised Service Centre.

Clean the power cord plug regularly to prevent it from becoming covered in dust.

- If dust builds up on the power cord plug, the resulting humidity can damage the insulation, which could result in fire. Pull the power cord out from the wall outlet and wipe it with a dry cloth.
- If not using the projector for an extended period of time, pull the power cord plug out from the wall outlet.

Do not do anything that might damage the power cord or the power cord plug.

- Do not damage the power cord, make any modifications to it, place it near any hot objects, bend it excessively, twist it, pull it, place heavy objects on top of it or wrap it into a bundle.
- If the power cord is used while damaged, electric shocks, short-circuits or fire may result.
- Ask an Authorised Service Centre to carry out any repairs to the power cord that might be necessary.

Do not handle the power cord plug with wet hands.

- Failure to observe this may result in electric shocks.

Insert the power cord plug securely into the wall outlet.

- If the plug is not inserted correctly, electric shocks or overheating could result.
- Do not use plugs which are damaged or wall outlets which are coming loose from the wall.

Do not place the projector on top of surfaces which are unstable.

- If the projector is placed on top of a surface which is sloped or unstable, it may fall down or tip over, and injury or damage could result.

Do not place the projector into water or let it become wet.

- Failure to observe this may result in fire or electric shocks.

Do not place liquid containers on top of the projector.

- If water spills onto the projector or gets inside it, fire or electric shocks could result.
- If any water gets inside the projector, contact an Authorised Service Centre.

Do not insert any foreign objects into the projector.

- Do not insert any metal objects or flammable objects into the projector or drop them onto the projector, as doing so can result in fire or electric shocks.

Keep the remote control unit out of the reach of children, and do not look into the laser beam or point it towards other people.

- If the laser beam which is emitted by the remote control unit transmitter is pointed directly into the eyes, it may cause visual ability to be impaired.

Do not allow the + and - terminals of the batteries to come into contact with metallic objects such as necklaces or hairpins.

- Failure to observe this may cause the batteries to leak, overheat, explode or catch fire.
- Store the batteries in a plastic bag and keep them away from metallic objects.

During a thunderstorm, do not touch the projector or the cable.

- Electric shocks can result.

Do not use the projector in a bath or shower.

- Fire or electric shocks can result.

Do not look into the lens while the projector is being used.

- Strong light is emitted from the projector's lens. If you look directly into this light, it can hurt and damage your eyes.

Do not bring your hands or other objects close to the air outlet port.

- Heated air comes out of the air outlet port. Do not bring your hands or face, or objects which cannot withstand heat close to this port, otherwise burns or damage could result.

When replacing the lamp, allow it to cool for at least one hour before handling it.

- The lamp cover gets very hot, and contact with it can cause burns.

Before replacing the lamp, be sure to unplug the power cord from the power outlet.

- Electric shocks or explosions can result if this is not done.

Keep the SD memory card out of the reach of infants.

- If the memory card is swallowed, death by suffocation may result. If you believe that the memory card may have been swallowed, seek medical advice immediately.

Caution

Do not cover the air inlet or the air outlet.

- Doing so may cause the projector to overheat, which can cause fire or damage to the projector.

Do not set up the projector in humid or dusty places or in places where the projector may come into contact with smoke or steam.

- Using the projector under such conditions may result in fire or electric shocks.

When disconnecting the power cord, hold the plug, not the cord.

- If the power cord itself is pulled, the cord will become damaged, and fire, short-circuits or serious electric shocks may result.

Always disconnect all cables before moving the projector.

- Moving the projector with cables still attached can damage the cables, which could cause fire or electric shocks to occur.

Do not place any heavy objects on top of the projector.

- Failure to observe this may cause the projector to become unbalanced and fall, which could result in damage or injury.

Do not short-circuit, heat or disassemble the batteries or place them into water or fire.

- Failure to observe this may cause the batteries to overheat, leak, explode or catch fire, and burns or other injury may result.

When inserting the batteries, make sure the polarities (+ and -) are correct.

- If the batteries are inserted incorrectly, they may explode or leak, and fire, injury or contamination of the battery compartment and surrounding area may result.

Use only the specified batteries.

- If incorrect batteries are used, they may explode or leak, and fire, injury or contamination of the battery compartment and surrounding area may result.

Do not mix old and new batteries.

- If the batteries are inserted incorrectly, they may explode or leak, and fire, injury or contamination of the battery compartment and surrounding area may result.

Do not put your weight on this projector.

- You could fall or the projector could break, and injury may result.
- Be especially careful not to let young children climb onto the projector.

Disconnect the power cord plug from the wall outlet as a safety precaution before carrying out any cleaning.

- Electric shocks can result if this is not done.

Do not install the accessory wireless card to any device other than the card slot of the projector.

- If this is not observed, damage to the device may result.

Ask an Authorised Service Centre to clean inside the projector at least once a year.

- If dust is left to build up inside the projector without being cleaned out, it can result in fire or problems with operation.
- It is a good idea to clean the inside of the projector before the season for humid weather arrives. Ask your nearest Authorised Service Centre to clean the projector when required. Please discuss with the Authorised Service Centre regarding cleaning costs.

We are constantly making efforts to preserve and maintain a clean environment. Please take non repairable units back to your dealer or a recycling company.

Accessories

Check that all of the accessories shown below have been included with your projector.

Remote control unit (N2QAEA000008 x1) 	AAA batteries for remote control unit (x2) 	RGB signal cable [3.0 m (9'10"), K1HB15FA0001 x1] 
	Video/Audio cable [3.0 m (9'10"), K2KA2FA00001 x 1] 	Power cord for U.K. (K2CT3FZ00001 x 1) 
Carrying bag (TPEP007 x1) 	Power cord for Continental Europe (K2CM3FZ00001 x 1) 	USB cable (3.0 m, K1HB04FD0002 x 1) 
CD-ROM (TQBH9003 x1) 	SD memory card (8 MB, RP-SD008BEZ0 x1) 	
Wireless Card (N5HBD0000003 x1) 	Protective case for SD memory card (RP-SDCC0 x1) 	

Precautions on handling

Cautions regarding transportation

Be sure to attach the lens cover before transporting the projector.

The projection lens is extremely susceptible to vibration and shocks. When carrying the projector, use the accessory carrying bag.

Cautions regarding setting-up

Observe the following at all times when setting up the projector.

Avoid setting up in places which are subject to vibration or shocks.

If the projector is set up in locations with strong vibration, such as near a motor, or if it is installed inside a vehicle or on board a ship, the projector may be subjected to vibration or shocks which can damage the internal parts and cause malfunctions or accidents. Accordingly, set up the projector in a place which is free from such vibrations and shocks.

Do not set up the projector near high-voltage power lines or near motors.

The projector may be subject to electromagnetic interference if it is set up near high-voltage power lines or motors.

If installing the projector to the ceiling, ask a qualified technician to carry out all installation work.

If the projector is to be suspended from the ceiling, you will need to purchase the separate installation kit (Model No.: ET-PK730). Furthermore, all installation work should only be carried out by a qualified technician.

If using this projector at high elevations (above 1400 m), set the FAN CONTROL to HIGH. (Refer to page 43.)

Failure to observe this may result in malfunctions.

Notes on use

In order to get the best picture quality

If outside light or light from indoor lamps is shining onto the screen, the images projected will not have good contrast. Draw curtains or blinds over any windows and turn off any fluorescent lights near the screen to prevent reflection.

Do not touch the surfaces of the lens with your bare hands.

If the surface of the lens becomes dirty from fingerprints or anything else, this will be magnified and projected onto the screen. Moreover, when not using the projector, retract the lens and then cover it with the accessory lens cover.

About the screen

If the screen you are using is dirty, damaged or discoloured, attractive projections cannot be obtained. Do not apply any volatile substances to the screen, and do not let it become dirty or damaged.

About the lamp

The lamp may need to be replaced earlier due to variables such as a particular lamp's characteristics, usage conditions and the installation environment, especially when it is subjected to a continuous use for more than 10 hours.

About optical parts

If the projector is subjected to a continuous use for more than 6 hours every day, you may have to replace optical parts, such as LCD panels or polarizers within less than one year. When you use the projector in such a case, ask your dealer or an Authorized Service Center for details.

About the wireless card and SD memory card

Static electricity from the human body can damage the wireless card or SD memory card. To prevent this, you should touch a nearby metallic object such as an aluminium sash or a door knob to dissipate the static charge from your body.

About the wireless card slot and SD memory card slot

Make sure that there are no foreign objects inside the slot when inserting the wireless card or SD memory card. Failure to observe it may damage the card and the slot.

Before carrying out cleaning and maintenance, be sure to disconnect the power cord plug from the wall outlet.

Wipe the cabinet with a soft, dry cloth.

If the cabinet is particularly dirty, soak the cloth in water with a small amount of neutral detergent in it, squeeze the cloth very well, and then wipe the cabinet. After cleaning, wipe the cabinet dry with a dry cloth.

If using a chemically-treated cloth, read the instructions supplied with the cloth before use.

Do not wipe the lens with a cloth that is dusty or which produces lint. If any dust or lint gets onto the lens, such dust or lint will be magnified and projected onto the screen. Use a blower to clean any dust and lint from the lens surface, or use a soft cloth to wipe off any dust or lint.

Location and function of each part

Projector <Top, right and front>

① **Projector control panel**
(page 14)

② **Focus ring**
(page 27)

③ **Air inlet ports**
Do not cover these ports.

④ **Leg adjuster buttons(L/R)**
(page 26)
These buttons are used to unlock the front adjustable legs. Press to adjust the angle of tilt of the projector.

NOTE:

- Information given above may be changed in future.

③ **Lamp unit holder**
(page 51)

④ **Carrying handle**

⑤ **Air outlet port**
Do not cover this port.
When you change the direction of

the air flow out of the outlet port, make sure that the MAIN POWER is "OFF" and the projector is cooled down.

WARNING

Do not bring your hands or other objects close to the air outlet port.

- Heated air comes out of the air outlet port. Do not bring your hands or face, or objects which cannot withstand heat close to this port, otherwise burns or damage could result.

NOTE:

- During projection of an image, the cooling fan will operate, emitting a small noise as it operates. Turning the lamp on or off will cause this noise to increase a little.
- By using the OPTION menu to set "LAMP POWER" to "LOW", the operating sound of the fan can be reduced. (Refer to page 43.)

Remote control unit

Projector control panel

① Power indicator

(pages 26, 27 and 44)

This indicator illuminates red when the MAIN POWER switch is turned on (standby mode), and illuminates green when the power is turned on and a picture starts to be projected. When the WEB STANDBY is set to "ON", the cooling fan operates and the power indicator on the projector flashes slowly in red.

② RGB INPUT indicator

(page 54)

This indicator shows whether a signal is being input to the RGB input connectors (RGB 1 IN/RGB 2 IN). When an input signal is detected, the indicator illuminates.

③ LAMP indicator

(page 49)

This indicator illuminates when it is time to replace the lamp unit. It flashes if a circuit abnormality is detected.

④ Input select (INPUT, RGB, VIDEO) buttons

(page 26)

⑤ TEMP indicator

(page 48)

This indicator illuminates if an abnormally high temperature is detected inside the projector or around it. If the temperature rises above a certain level, the power supply will be turned off automatically and the indicator will illuminate or flash.

⑥ POWER button

(pages 26 and 27)

⑦ AUTO SETUP button

(pages 26 and 54)

If this button is pressed while a picture is being projected, the projection settings will be adjusted automatically in accordance with the signal being input. In addition, the angle of tilt of the projector will be automatically detected and adjusted in order to correct any keystone distortion. ("AUTO SETUP" will appear on the screen during adjustment.) Set

"AUTO KEYSTONE" in the OPTION menu to "OFF" to prevent any deterioration of the picture as a result of keystone correction.

⑧ SHUTTER button

(page 42)

This button is used to momentarily turn off the picture and sound.

⑨ MENU button

(pages 28 and 30)

This button is used to display the menu screens. When a menu screen is being displayed, this button can be used to return to a previous screen or to clear the screen.

⑩ Arrow (▲▼◀▶) buttons

(page 30)

These buttons are used to select and adjust items in the menu screens.

*When in computer operating mode, these buttons on the remote control unit function differently. (page 19)

⑪ ENTER button

(page 30)

This button is used to accept and to activate items selected in the on-screen menus.

*When in computer operating mode, this button on the remote control unit operates differently. (page 19)

⑫ Laser emitter

(page 18)

⑬ Infrared emitter

(page 20)

⑭ Click button

(page 19)

This button can be used when the operating mode select switch is moved to the left (Computer).

⑮ PAGE button

(page 19)

This button can be used when the operating mode select switch is moved to the left (Computer).

⑯ Operation indicator

(page 18)

This indicator illuminates while a laser beam is being emitted (while the LASER button is being pressed). It flashes when any other buttons are being pressed.

⑰ LASER button

(page 18)

A beam of laser light is emitted while this button is being pressed. This laser beam can be used as a pointer to point to something on the screen.

⑱ FREEZE button

(page 32)

This button is used to momentarily freeze projection so that a still picture is displayed.

⑲ D.ZOOM +/- buttons

(page 33)

These buttons are used to enlarge the projected image.

⑳ VOLUME +/- buttons

These buttons are used to adjust the volume of the sound output from the projector's built-in speaker. Refer to page 41 for details on how to adjust the volume using the buttons on the projector control panel.

㉑ FUNCTION (FUNC1) button

(pages 38 and 44)

This button can be used for 1) switching on and off the sound volume and 2) entering into the keystone distortion correction mode. Use the FUNC1 item in the OPTION menu to select which you wish to use.

㉒ STD (standard) button

(page 32)

This button is used to reset the projector adjustment values to the factory default settings.

㉓ Operating mode (Computer, Projector) select switch

(page 19)

Move this switch to the left side to use the remote control unit to operate a computer, and move it to the right side to operate the projector.

<Connector panel>

① USB port
(page 19)

The remote control unit can be used as a personal computer mouse by connecting the projector to a personal computer with the supplied USB cable. (4-pin square connector)

② SERIAL connector
(pages 22, 23 and 46)

This connector is used to connect a personal computer to the projector in order to externally control the projector. (RS-232C compatible)

③ RGB1 IN connector
(pages 22 and 23)

This connector is used to input RGB signals and YPbPr signals.

④ RGB2 IN/RGB1 OUT connector
(pages 22, 23 and 43)

This connector is used to input or output RGB signals and YPbPr signals. Use the RGB2 SELECT item in the OPTION menu to select whether you want input or output with this connector.

⑤ AUDIO OUT jack
(pages 22 and 23)

This jack is used to output the audio signals which are input to the projector. If audio equipment

is connected to this jack, no sound will be output from the built-in speaker.

⑥ S-VIDEO IN connector
(pages 22 and 40)

This connector is used to input signals from a S-VIDEO-compatible equipment such as a video deck. The connector is S1 signal compatible, and it automatically switches between 16:9 and 4:3 aspect ratios in accordance with the type of signal being input.

⑦ VIDEO IN jack
(page 22)

This jack is used to input video signals from a video equipment such as a video deck.

⑧ AUDIO IN L-R (for VIDEO/S-VIDEO) jacks
(page 22)

Only one system is provided, so connect the appropriate connector when using VIDEO or S-VIDEO.

⑨ RGB AUDIO IN jack
(pages 22 and 23)

Only one system is provided, so connect the appropriate connector when using RGB1 or RGB2.

<Card slot>

① Slot cover

Covers the card slots.

② Wireless card slot

Insert the wireless card into here.

③ Eject switch

Use to remove the wireless card from the card slot.

④ Access lamp

Flashes while the projector is being accessed for reading or writing the data in the SD memory card.

⑤ SD memory card slot

Insert the SD memory card into here.

⑥ Connector

This connector is for connecting the wireless card to the projector's card slot. Be careful not to touch the connector.

⑦ Wireless card power indicator

Illuminates when the wireless card is operating.

<Wireless card>

<SD memory card>

Front

Back

⑧ Metal terminals

These terminals are for connecting the SD memory card to the projector's card slot. Do not touch the metal terminals with hands or metal objects, attach stickers to them, or allow them to become contaminated in any way.

⑨ Write-protect switch

If the write-protect switch on the SD memory card is moved to the LOCK position, it will not be possible to use any file editing functions such as deleting or moving image files.

Using the remote control unit

Laser beam pointer

The laser beam emitted from the remote control can be used as a pointer by pointing forward to the screen.

While the LASER button is being pressed, the laser beam is being emitted and the operating indicator illuminates.

Do not look into the laser emitter of the remote control unit or point the laser beam towards other people, otherwise damage to eyes may occur.

Caution

- Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.
- This remote control unit cannot be repaired.

Wireless mouse

You can use the remote control as a personal computer mouse. Set the Mode (Projector/Computer) switch on the remote control unit to "Computer" and connect the projector's USB port to a personal computer counterpart with the accessory USB cable.

Computer equipped with a USB port

- For Windows (Versions 98SE, Me, 2000 and XP), you can use the standard mouse driver which comes bundled with the operating system.

Mode switch (Computer/Projector)

Move the mode switch to the "Computer" position.

- Page buttons

^: Functions as the Page Up button on a personal computer keyboard.

v: Functions as the Page Down button on a personal computer keyboard.

- Arrow (▲▼◀▶) buttons

These buttons can move the cursor on a personal computer's screen as the personal computer mouse.

- **R-CLICK** button

This button functions as the right button on a personal computer mouse.

- Click button

This button functions as the left button on a personal computer mouse.

NOTE:

- The optional wireless receiver (ET-RMRC1) is needed for a personal computer not equipped with a USB port.

Inserting the batteries

① Open the cover.

② Insert the batteries so that the polarities are correct, and then close the cover.

NOTE:

- Do not drop the remote control unit.
- Keep the remote control unit away from liquids.
- Remove the batteries if not using the remote control unit for long periods.
- Do not use rechargeable batteries.

Operating range

If the remote control unit is held so that it is facing directly in front of the remote control signal receptors on the front or rear of the projector, the operating range is within approximately 7 m (23') from the surfaces of the receptors. Furthermore, the remote control unit can be operated from an angle of $\pm 30^\circ$ to the left or right and $\pm 15^\circ$ above or below the receptors.

NOTE:

- If there are any obstacles in between the remote control unit and the receivers, the remote control unit may not operate correctly.
- If strong light is allowed to shine onto the remote control signal receiver, correct remote control operation may not be possible. Place the projector as far away from light sources as possible.
- If facing the remote control unit toward the screen to operate the projector, the operating range of the remote control unit will be limited by the amount of light reflection loss caused by the characteristics of the screen used.

Connections

Notes on connections

- Read the instruction manual for each system component carefully before connecting it.
- Turn off the power supply for all components before making any connections.
- If the cables necessary for connecting a component to the system are not included with the component or available as an option, you may need to fashion a cable to suit the component concerned.
- If there is a lot of jitter in the video signal which is input from the video source, the picture on the screen may flicker. In such cases, it will be necessary to connect a TBC (time base corrector).
- The projector has a built-in speaker. However, you will need to connect a separate audio system to the AUDIO OUT jack if your needs specify high sound volumes. No sound will come out of the projector's built-in speaker while the AUDIO OUT jack is being used.
- It may not be possible to connect some types of computer. Refer to the list of compatible signals on page 59.
- The pin layout and signal names for the S-VIDEO IN connector are shown below.

External view

Pin No.	Signal
①	Earth (Luminance signal)
②	Earth (Colour signal)
③	Luminance signal
④	Colour signal

- The pin layout and signal names for the RGB/YPbPr (RGB1 IN/RGB2 IN) connector are shown below.

External view

Pin No.	Signal
①	R/Pr
②	G/G-SYNC/Y
③	B/Pb
⑫	SDA
⑬	HD/SYNC
⑭	VD
⑮	SCL

Pin ⑨ is spare.

Pins ④—⑧, ⑩ and ⑪ are for earth.

Pins ⑫ and ⑮ functions are only valid when supported by the computer

Example of connecting to video equipments

NOTE:

- Only one audio system circuit is available for the AUDIO IN L-R jacks for S-VIDEO/VIDEO signals, so if you wish to change the audio input source, you will need to remove and insert the appropriate plugs.
- Only one audio system circuit is available for the RGB AUDIO IN jacks, so if you wish to change the audio input source, you will need to remove and insert the appropriate plugs.
- If an audio system is connected to the AUDIO OUT jack, the sound volume balance can be controlled by the remote control unit which is supplied with the projector.
- If the video signal source is connected using a cable with a BNC connector plug, use a BNC/RCA adapter (sold separately) to convert the cable end to an RCA plug-type jack.
- Refer to page 59 for a list of compatible YPBPr signals which can be input to the projector.
- If the signal cables are disconnected or if the power supply for the computer or video deck is turned off while the digital zoom function is being used, this function will be cancelled.

Example of connecting to computer

NOTE:

- It is better to shut down the computer before turning off the MAIN POWER switch of the projector.
- Refer to the list of compatible signals on page 59 for the types of RGB signals which can be input to the projector by connecting a computer.
- Do not input the signal to the RGB2 IN/RGB1 OUT connector when the RGB2 SELECT item in the OPTION menu is set to OUTPUT. (Refer to page 43.)

Refer to the accessory CD-ROM for details on the wireless network that is used for controlling the projector with a personal computer by means of the wireless card.

Setting-up

Projection methods

In way of installing projector, any one of the following four projection methods are used. Select whichever projection method matches the setting-up method. (The projection method can be set from the OPTION menu. Refer to page 43 for details.)

		DESK/CEILING	
		DESK	CEILING
FRONT/REAR	FRONT		
	REAR		

NOTE:

- You will need to purchase the separate ceiling bracket (ET-PK730) when using the ceiling installation method.

Projector position

<Units: mm (inch)>

L: Projection distance
SH: Image height
SW: Image width
H1: Distance from centre of lens to bottom edge of projected image

Projection distances

Screen size (4:3)			Projection distance (L)		Height position (H1)
Diagonal length	Height (SH)	Width (SW)	Wide (LW)	Telephoto (LT)	
1.01 m(40")	0.61 m(2')	0.81 m(2'8")	1.2 m(3'11")	1.5 m(4'11")	0.06 m(2-13/32")
1.27 m(50")	0.76 m(2'6")	1.02 m(3'4")	1.6 m(5'2")	1.9 m(6'2")	0.08 m(3")
1.52 m(60")	0.91 m(3')	1.22 m(4')	1.9 m(6'2")	2.3 m(7'6")	0.09 m(3-19/32")
1.77 m(70")	1.07 m(3'6")	1.42 m(4'8")	2.2 m(7'2")	2.7 m(8'10")	0.11 m(4-6/32")
2.03 m(80")	1.22 m(4')	1.63 m(5'4")	2.5 m(8'2")	3.1 m(10'2")	0.12 m(4-26/32")
2.28 m(90")	1.37 m(4'6")	1.83 m(6')	2.8 m(9'2")	3.5 m(11'5")	0.14 m(5-13/32")
2.54 m(100")	1.52 m(5')	2.03 m(6'8")	3.1 m(10'2")	3.9 m(12'9")	0.15 m(6")
3.81 m(150")	2.29 m(7'6")	3.05 m(10')	4.7 m(15'5")	5.8 m(19')	0.23 m(9")
5.08 m(200")	3.05 m(10')	4.06 m(13'4")	6.2 m(20'4")	7.8 m(25'7")	0.31 m(12")
6.35 m(250")	3.81 m(12'6")	5.08 m(16'8")	7.8 m(25'7")	9.8 m(32'1")	0.38 m(15")
7.62 m(300")	4.57 m(15')	6.10 m(20')	9.4 m(30'10")	11.8 m(38'8")	0.46 m(18")

Setting-up dimensions which are not given in the above table can be calculated using the formulas below.

If the screen size (diagonal) is SD (m), then the following formula is used to calculate the projection distance for the wide lens position (LW) and the projection distance for the telephoto lens position (LT).

$$LW=0.031 \times SD / 0.0254 - 0.068$$

$$LT=0.0393 \times SD / 0.0254 - 0.066$$

For 16:9 aspect ratios, the following formula can be used to calculate the projection distance.

$$LW=0.034 \times SD / 0.0254 - 0.068$$

$$LT=0.043 \times SD / 0.0254 - 0.066$$

NOTE:

- The dimensions in the table above and the values obtained from the above formulas may contain slight errors.
- If you use the projection distance for the 16:9 screen, the 4:3 projection image overflows the screen at the top and bottom.
- If you set up the projector vertically, it may cause to damage the projector.
- It is recommended that you set up the projector in a place that is tilted at less than $\pm 30^\circ$. Setting up the projector in places that are tilted at more than $\pm 30^\circ$ may cause malfunctions.

Starting to use

Turning on the power

Please ensure that all preparations have been completed before turning on the power. (Refer to pages 21 – 25.)

- ① Remove the lens cover. 
- ② Connect the accessory power cord. 
- ③ Press the MAIN POWER switch to the "I" side to turn on the power. The power indicator on the projector will illuminate red. 
- ④ Press the POWER button. The power indicator on the projector will flash green. After a short period, the indicator will illuminate green, and a picture will be projected. 
- ⑤ Press the input select (INPUT, RGB, VIDEO) button to select the input signal. The input signal selected will change as shown at below each time an input select button is pressed. 
- ⑥ While pressing the adjuster buttons, adjust the forward/back angle of tilt of the projector. 
- ⑦ Press the AUTO SETUP button to initiate automatic positioning. The automatic positioning is only for vertical keystone distortion. To correct the horizontal keystone distortion or when keystone distortion has not been corrected to the optimum level, carry out the keystone correction as described on page 38. 

- ⑧ Turn the focus ring and the zoom knob to adjust the projected image focus and size.

Turning off the power

- ① Press the POWER button. "Power OFF" is displayed on the screen. 
- ② Select "OK" using the ◀ and ▶ buttons and press the ENTER button. The lamp unit will switch off and the picture will stop being projected. (The power indicator on the projector will illuminate orange.)
- ③ Wait until the power indicator on the projector illuminates red (until the cooling fan stops). Do not in any way cut power to the projector while the cooling fan is still operating. Be careful not to switch off the MAIN POWER switch of the projector, unplug the power cord from the electrical outlet or turn off in-line switches such as tabletop power switches.
- ④ Press the MAIN POWER switch to the "O" side to turn off the power.

NOTE:

- After the power is turned off, the lamp unit will take some time to cool down. If you turn the power back on again before the lamp unit has cooled down, the lamp unit may not turn on straight away, but it will turn on automatically after a short period. (During this time, the power indicator on the projector will flash orange.)
- When the projector is in standby mode (the power indicator on the projector is illuminated red), the projector will still draw a maximum 1.7 W of power, even when the cooling fan has stopped.
- When the WEB STANDBY is set to "ON", the cooling fan operates and the power indicator on the projector flashes slowly in red and the projector draw a maximum 43 W of power. (page 43)
- If the MAIN POWER switch is accidentally turned off while the projector is being used, the lamp unit may not turn on straight away after the power is turned back on. In such cases, the lamp unit will turn back on automatically after a short period. (During this time, the power indicator on the projector will flash green.)
- A tinkling sound may be heard while the power indicator is turned off, but this is not a sign of a malfunction.
- You can also turn off the power by pressing the POWER button twice.

On-screen menus

Menu screens

The various settings and adjustments for this projector can be carried out by selecting the operations from on-screen menus.

The general arrangement of these menus is shown below.

PICTURE menu (page 34)

OPTION menu (page 42)

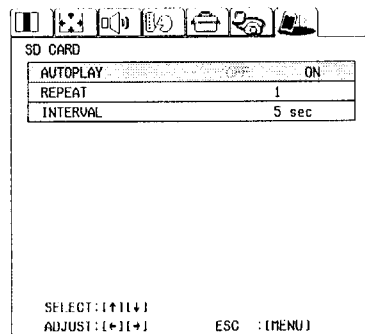

The RGB/YPbPr item is displayed when an RGB/YPbPr signal is being input.

NETWORK menu (page 45)

SD CARD menu (page 45)

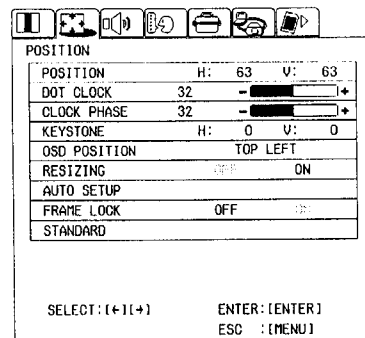

Menu operation guide

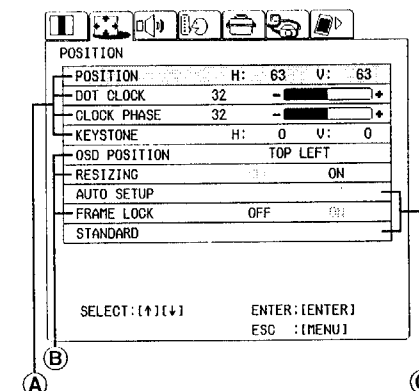

- 1 Press the **MENU** button.
The menu screen will be displayed.

- 2 Press the **◀** or **▶** arrow buttons to select a menu.
The selected menu screen will then be displayed.
(Example: POSITION menu)

- 3 Press the **ENTER** button to accept the selection.
You can select an item here. The selected item is shown in yellow.
- 4 Select an item pressing the **▲** or **▼** buttons.

- A For the value adjusting items
Press the **ENTER** button to display an individual adjustment screen.

- Press the **◀** or **▶** buttons to adjust the setting.
You can also adjust the bar-scale items pressing the **◀** or **▶** buttons in the menu screen.
Some items can be adjusted by pressing the **▲** or **▼** buttons.

- B For the selective items

- Select the setting by pressing the **◀** or **▶** buttons.

- C For the fixed items
Press the **ENTER** button, and the function will work.

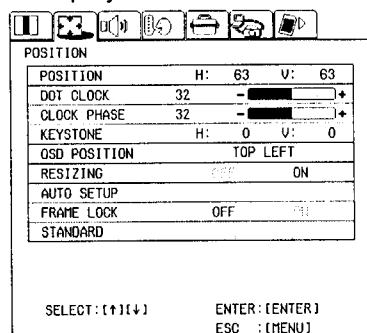

Returning to the previous screen

Press the **MENU** button to return to the previous screen.

Returning a setting to the factory default

If you press the STD (standard) button on the remote control unit, you can return settings to the factory default settings. However, the operation of this function varies depending on which screen is being displayed.

- When a menu screen is being displayed

All items displayed will be returned to their factory default settings.

Using the freeze function

The picture will alternate between a still picture and a moving picture each time the FREEZE button on the remote control unit is pressed.

NOTE:

- You can also select STANDARD from the menu screen and then press the ENTER button.
- When an individual adjustment screen is being displayed

Only the item displayed will be returned to the factory default setting.

Using the D.ZOOM (digital zoom) function

This function lets you enlarge the picture.

- ① Press a D.ZOOM +/- button

The picture will then be enlarged to 1.5 times the normal size.

- ② Use the ▲, ▼, ◀ and ▶ buttons to move the enlarged area which you want to project.

- ③ Use the D.ZOOM +/- buttons to change the enlargement ratio. The enlargement ratio can be changed within the range of x1 to x4, by 30 steps.

- ④ Press the MENU button to return to the normal screen.

NOTE:

- This function can only be used when using the remote control unit.
- If the type of signal being input changes while the digital zoom function is being used, the digital zoom function will be cancelled.

Adjusting the picture

Select the item pressing the ▲ or ▼ buttons on the remote control unit or the projector.

Press the ◀ or ▶ buttons to set the selective items. For the value adjusting items, press the ENTER button to display an individual screen, and press the ◀ or ▶ buttons to adjust the setting.

PICTURE

PICTURE MODE	STANDARD
COLOR TEMP.	STANDARD
BRIGHT	32
CONTRAST	32
STANDARD	

SELECT: [↑][↓]
ADJUST: [←][→] ESC: [MENU]

PICTURE MODE

Select the picture mode that best matches the image source and room conditions.

The mode best used in dark rooms is NATURAL. For rooms having regular lighting conditions in use, select STANDARD. For exceptionally bright rooms, use DYNAMIC.

Colour Hue Setting (color temperature)

This is used to adjust the white areas of the picture if they appear bluish or reddish.

COLOR

(S-VIDEO/VIDEO/YPbPr only)

Press the ▶ button to make the colour more vivid in tone, and press the ◀ button to make the colour more pastel in tone.

TINT

(NTSC/NTSC 4.43/YPbPr only)

This adjusts the flesh tones in the picture. Press the ▶ button to make flesh tones more greenish, and press the ◀ button to make the flesh tones more reddish.

BRIGHT

This adjusts the darker areas (black areas) in the picture. Press the ▶ button if dark areas are too solid (for example, if hair is difficult to see), and press the ◀ button if black areas are too light (grey rather than black).

CONTRAST

This adjusts the contrast of the picture. Press the ▶ button to make the picture brighter, and press the ◀ button to make the picture darker. (Adjust the BRIGHT setting first if required before adjusting the CONTRAST setting.)

SHARPNESS

Press the ▶ button to make the picture details sharper, and press the ◀ button to make the picture details softer.

Noise Reduction (NR)

(When S-VIDEO/VIDEO/YPbPr signals are being input)

If the signal is of such poor quality that picture interference appears, you can suppress this interference by adjusting the NR (Noise Reduction), except for 750p (720p), HDTV60 (1080i/60) and HDTV50 (1080i/50) signals. To strengthen the effect, press the ▶ button. To turn it off, set to "0" by pressing the ◀ button.

TV SYSTEM

(S-VIDEO/VIDEO only)

AUTO1 The projector automatically distinguishes between NTSC/NTSC 4.43/PAL/PAL60/SECAM signals.

AUTO2 The projector automatically distinguishes between NTSC/PAL-M/PAL-N signals.

NOTE:

- This should normally be set to "AUTO1" or "AUTO2". If the signal is of such poor quality that the correct format cannot be automatically distinguished, change the setting manually to the required TV system.

WHITE BALANCE R/G/B

(RGB only)

This is used to adjust the white areas of the picture if they appear coloured. Press the ◀ button to make the selected colour lighter. Press the ▶ button to make the selected colour stronger.

Projecting sRGB-compatible pictures

sRGB is an international colour reproduction standard (IEC61966-2-1) established by the International Electrotechnical Commission (IEC). If you would like the colours in sRGB-compatible pictures to be reproduced more faithfully, make the following settings.

- ① Press the ▲ or ▼ button to select "PICTURE MODE", and then use the ◀ or ▶ button to select "NATURAL".
- ② Press the ▲ or ▼ button to select "COLOR TEMP.", and then use the ◀ or ▶ button to select "STANDARD".
- ③ Press the STANDARD (STD) button on the remote control unit.
- ④ Select the LAMP POWER item in the OPTION menu by pressing the ▲ or ▼ buttons and set to "HIGH" by pressing the ◀ or ▶ buttons.

NOTE:

- sRGB is only enabled when RGB signals are being input.

Adjusting the position

When the input signal is RGB, first press the AUTO SETUP button to initiate automatic positioning. If the optimum setting is not obtained when AUTO SETUP is carried out, adjust by the following procedure.

Select the item pressing the ▲ or ▼ buttons on the remote control unit or the projector.

Press the ◀ or ▶ buttons, to adjust the alternative items. For the numerically adjustable items, press the ENTER button to display an individual screen, and press the ◀ or ▶ buttons to adjust the setting. Some items can be adjusted pressing the ▲ or ▼ buttons.

POSITION

Moves the picture position.

Press the ◀ or ▶ buttons to move the picture horizontally.

Press the ▲ or ▼ buttons to move the picture vertically.

DOT CLOCK

(RGB only)

Periodic striped pattern interference (noise) may occur when a striped pattern such as the one below is projected. If this happens, use the ◀ and ▶ buttons to adjust so that any such noise is minimised.

CLOCK PHASE

(RGB only)

Adjust the DOT CLOCK setting first before carrying out this adjustment. Use the ◀ and ▶ buttons to adjust so that the noise level is least noticeable.

NOTE:

- If signals with a dot clock frequency of 140 MHz or higher are being input, interference may not be completely eliminated when the DOT CLOCK and CLOCK PHASE adjustments are carried out.

KEYSTONE

Before carrying out keystone correction, 1) adjust the forward/back angle of tilt of the projector by pressing the adjuster buttons and 2) press the AUTO SETUP buttons to correct vertical keystone distortion. (page 26)

The vertical keystone distortion will be automatically corrected by the projectors automatic setup function.

However the horizontal distortion or adjustment of the tilted screen needs to be corrected manually by following any of the procedures below.

Picture condition	Operation
	Press the ▲ button.
	Press the ▼ button.
	Press the ◀ button.
	Press the ▶ button.

NOTE:

- If you press the AUTO SETUP button after correcting the keystone distortion manually, the automatic keystone correction function will operate and the corrected picture will return to its previous incorrect condition. In addition, if you change the input signal and press the AUTO SETUP button, the keystone correction may be cancelled depending on the type of signal and the angle of tilt of the projector. To prevent them from happening, you can set "AUTO KEYSTONE" in the OPTION menu to "OFF"
- The greater the correction of keystone distortion amount, the more the picture

quality will deteriorate, and the harder it will become to achieve a good level of focus. To obtain the best picture quality, set up the projector and screen in such a way that the amount of keystone correction required is as minimal as possible.

- The picture size will also change when correction of keystone distortion is carried out.
- The range of keystone correction varies depending on the type of signal being input. If you make an adjustment that is outside the allowable range, the setting will not be changed. In addition, if the input signal changes after keystone correction has been carried out, the correction setting may be cancelled. This indicates that the current correction setting exceeds the allowable range for the new input signal.
- If you correct both vertical and horizontal keystone distortion at the same time, the allowable range of keystone correction becomes smaller. If you make an adjustment that is outside the allowable range, the setting will not be changed.

OSD POSITION

Press the ◀ or ▶ buttons to move the OSD position.

ASPECT

This setting is only valid for an S-VIDEO/VIDEO signal and a YPBPr signal in 525i (480i), 525p (480p) and 625i format.

AUTO

(S-VIDEO only)

When an S1 video signal is input to the S-VIDEO terminal, the aspect ratio is changed automatically to project a 16:9 picture.

4:3

The input signal is projected without change.

16:9

The picture is compressed to a ratio of 16:9 and projected.

When a squeezed signal is being input. (The projected image is contracted vertically)

S4:3

The size of the input signal is compressed to 75% and projected. (This is useful for projecting a picture with a 4:3 aspect ratio onto a 16:9 screen.)

When a 4:3 signal is being input

NOTE:

- **S1 video signals**

S1 video signals are a type of video signal with an aspect ratio of 16:9 which include a detector signal. This detector signal is output by some sources such as wide-vision video decks. If the AUTO setting above is selected, this projector will recognise the detector signal and automatically switch the aspect ratio to 16:9 in order to project the picture.

- This projector is equipped with an aspect ratio selection function. However, if a mode which does not match the aspect ratio of the input signal is selected, it may affect the quality of viewing of the original picture. Keep this in mind when selecting the aspect ratio.
- If using this projector in places such as cafes or hotels with the aim of displaying programmes for viewing for a commercial purpose or for public presentation, note that if the aspect ratio (16:9) selection function is used to change the aspect ratio of the screen picture, you may be infringing the rights of the original copyright owner for that programme under copyright protection laws.
- If a normal (4:3) picture which was not originally intended for wide-screen viewing is projected onto a wide screen, distortion may occur around the edges of the picture so that part of the picture is no longer visible. Such programmes should be viewed in 4:3 mode to give proper consideration to the aims and intentions of the original programme's creator.

RESIZING

This should normally be set to "ON". (This setting is only for signals which have lower resolutions than the LCD panels. Refer to page 59 for details.)

ON

The pixel resolution of the input signal is converted to the same resolution as the LCD panels before being projected. For signals with lower resolutions, gaps in the pixels are automatically interpolated into the picture before it is projected. This may sometimes cause problems with the quality of the picture.

OFF

The picture signal is projected at its original resolution, with no pixel conversion. The projected picture will be smaller than normal, so adjust the zoom setting or move the projector forwards or backwards to adjust the picture size if necessary. If set to "OFF", some features, such as D.ZOOM (digital zoom) or keystone distortion correction will not function.

AUTO SETUP

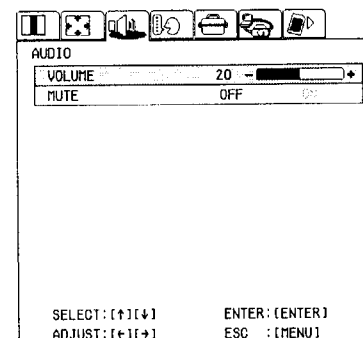

This item functions in the same way as the AUTO SETUP button on the remote control unit. (page 14)

FRAME LOCK

If the picture's condition is bad while a RGB moving picture signal is projected, set the FRAME LOCK to "ON". Refer to page 59 on compatible RGB signals.

Audio adjustment

Select the items by pressing the ▲ or ▼ buttons on the remote control unit or the projector.

**VOLUME**

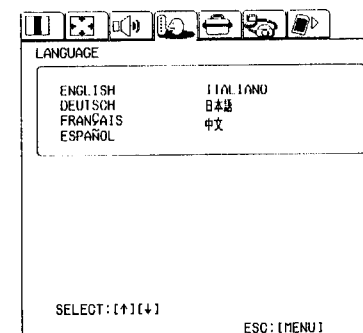

Press the ◀ or ▶ buttons to adjust the volume of the sound output by the projector's built-in speaker.

MUTE

Set the MUTE to "ON" pressing the ◀ or ▶ buttons to turn off the volume of the sound output. To release muting, set to "OFF" pressing the ◀ or ▶ buttons.

Changing the display language

Use the ▲ and ▼ buttons on the projector or remote control unit to select a language, then press the MENU button to accept the setting.

Option settings

Select the item pressing the ▲ or ▼ buttons on the remote control unit or the projector.

Press the ◀ or ▶ buttons to adjust the selective items. To make the SHUTTER or WEB PASSWORD functions*work, press the ENTER button.

OPTION		
SHUTTER		
OSD	ON	ON

WEB CONTROL		ON
WEB STANDBY	ON	ON
WEB PASSWORD		
CONTROL KEY	ON	ON
FUNC1	MUTE	ON
SELECT: [↑] [↓] ADJUST: [←] [→] ESC: [MENU]		

SHUTTER

The shutter function can be used to momentarily turn off the picture and sound from the projector when the projector is not being used for short periods of time, such as during breaks in meetings or when carrying out preparation. The projector uses less power in shutter mode than it does in normal projection mode.

OSD

ON

The current input name is displayed in the top-right corner of the screen when the input signal is changed.

OFF

Use this setting when you do not want the current input name to be displayed.

AUTO KEYSTONE

This should normally be set to ON.

ON

During automatic setup, the angle of tilt of the projector is detected and vertical keystone distortion is corrected automatically.

OFF

Use this setting when you do not want automatic keystone correction to be carried out during automatic setup, such as when the screen itself is at an angle.

RGB/YPbPr

This setting is valid when 750p, HDTV60, HDTV50, 525p, 625i and 525i signals are being input. Select the setting in accordance with the input signal.
The RGB/YPbPr item is displayed when an RGB1 IN or RGB2 IN connectors has a signal being input.

AUTO RGB IN

This should normally be set to OFF.

ON

If the input source has been changed to RGB, automatic setup automatically detects whether the RGB1 or the RGB2 connector is being used to input the signal, and the signals from the connector that it detects are then projected.

(If a picture is being projected, the signal source is not automatically changed.)

OFF

Use this setting when you do not want the signal source to be changed automatically during automatic setup.

RGB2 SELECT

This setting is used to select the function of the RGB2 IN/RGB1 OUT connector.

BACK COLOR

This sets the colour which is projected onto the screen when no signal is being input to the projector.

FRONT/REAR

This setting should be changed in accordance with the projector setting-up method.

Set to "FRONT" when using a normal reflective screen with the projector positioned in front of the screen, and set to "REAR" when using a translucent screen with the projector positioned behind the screen.

DESK/CEILING

This setting should be changed in accordance with the projector setting-up method.
Set to "DESK" when setting up the

projector on a desk or similar, and set to "CEILING" when suspending the projector from the ceiling using the ceiling bracket which is sold separately.

LAMP POWER

This setting changes the lamp brightness. When set to "LOW", the luminance of the lamp is reduced, but the projector uses less power, and the operating noise is also reduced. This can help to extend the lamp's operating life. If using the projector in small rooms where high luminance is not required, it is recommended that you set the LAMP POWER to "LOW".

LAMP RUN TIME

This setting displays the usage time for the lamp unit which is currently being used. If the lamp unit is replaced in the way described on page 52, the cumulative usage time for the lamp unit will be reset to zero.

NOTE:

- The lamp's operating life varies depending on the usage conditions (such as the LAMP POWER setting and the number of times the power is turned on and off).

FAN CONTROL

If using of this projector at high elevations (above 1400 m), set the FAN CONTROL to "HIGH".

WEB CONTROL

To control the projector with a personal computer by means of the wireless network, set the WEB CONTROL to "ON". To prevent it, set to "OFF".

WEB STANDBY

To turn on and off the power with a personal computer by means of the wireless network, set the WEB STANDBY to "ON".

When the WEB STANDBY is set to "ON", the cooling fan operates and the power indicator on the projector flashes slowly in red.

WEB PASSWORD

You can set the password for controlling the projector with a personal computer by means of the wireless network. Use the ▲ or ▼ buttons to change the characters, and use the ◀ or ▶ buttons to change the character position. When finished, press the ENTER button. The projector comes from the factory without any password. If password setting is complete, the password will not be displayed on the WEB PASSWORD screen. When you forget it, set it again from the beginning.

CONTROL KEY

To make the buttons on the projector not function, set the CONTROL KEY to "OFF".

To use the buttons on the projector, set to ON. (page 14)

FUNC 1

This assigns a function to the FUNC1 button of the remote control unit.

MUTE

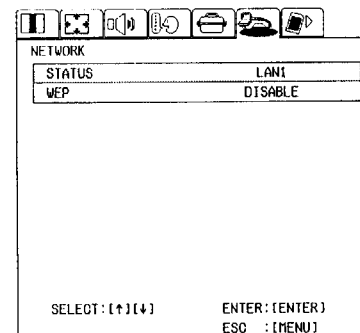

- Functions in the same way as the MUTE function. (page 41)

KEYSTONE

- Functions in the same way as when "KEYSTONE" is selected from the POSITION menu screen. (page 38)

NETWORK SETUP

You need make adjustment on some items when controlling the projector with a personal computer by means of the wireless network. Refer to the accessory CD-ROM for details.

STATUS

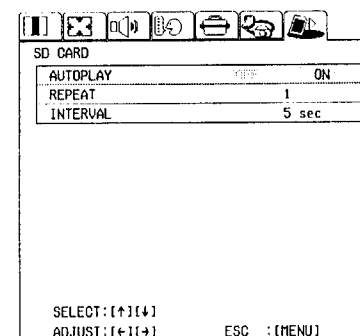

This setting is used to adjust the LAN to control the projector by means of the wireless network.

WEP

This setting is for encrypting data transmitted by means of the wireless network.

SD CARD SETUP

The following settings are used when projecting the pictures recorded in the SD memory card. Refer to the accessory CD-ROM for details.

AUTO PLAY

Plays the pictures recorded in the SD memory card automatically.

REPEAT

This setting is for adjusting the times of the auto play.

INTERVAL

This setting is adjusting the interval of the auto play.

Using the SERIAL connector

The serial connector which is on the side connector panel of the projector conforms to the RS-232C interface specification, so that the projector can be controlled by a personal computer which is connected to this connector.

Connection

NOTE:

- Use a proper communication cable which is suitable for the personal computer to connect the serial connector and the personal computer.

Pin layout and signal names for SERIAL connector

D-SUB 9-pin connector seen from outside

Pin No.	Signal name	Contents
①		NC
②	TXD	Transmitted data
③	RXD	Received data
④		NC
⑤	GND	
⑥	DSR	Connected internally
⑦	CTS	
⑧	RTS	
⑨		NC

Communications settings

Signal level	RS-232C
Sync. method	Asynchronous
Baud rate	9 600 bps
Parity	None
Character length	8 bits
Stop bit	1 bit
X parameter	None
S parameter	None

Basic format

The data sent from the computer to the projector is transmitted in the format shown below.

STX	Command	Parameter	ETX
Start byte (02h)	1 byte (3 bytes)	1 byte-5 bytes	End byte (03h)

NOTE:

- The projector can not receive the command for 10 seconds after the lamp is switched on. Wait 10 seconds before sending the command.
- If sending multiple commands, check that a response has been received from the projector for one command before sending the next command.
- When a command which does not require parameters is sent, the colon (:) is not required.
- If an incorrect command is sent from the personal computer, the "ER401" command will be sent from the projector to the personal computer.

Control commands

The commands which the personal computer can use to control the projector are shown in the following table.

Command	Control Contents	Remarks
PON	Power ON	In standby mode, all commands other than the PON command are ignored. <ul style="list-style-type: none"> • The PON command is ignored during lamp ON control. • If a PON command is received while the cooling fan is operating after the lamp has switched off, the lamp is not turned back on again straight away, in order to protect the lamp.
POF	Power OFF	
AVL	Volume	Parameter 000-063(Adjustment value 0-63)
IIS	Input signal selection	Parameter VID=VIDEO SVD=S-VIDEO RG1=RGB1(YPbPr1) RG2=RGB2(YPbPr2) NWP=NETWORK SDC=SD CARD
Q\$\$	Lamp ON condition query	Parameter 0 = Standby 1 = Lamp ON control active 2 = Lamp ON 3 = Lamp OFF control active

Indicators

There are two indicators on the control panel of the projector which give information about the operating condition of the projector. These indicators illuminate or flash to warn you about problems that have occurred inside the projector, so if you notice that one of the indicators is on, turn off the power and check the table below for the cause of the problem.

TEMP indicator			
Indicator display	Illuminated (red) (Lamp unit on)	Flashing (red) (Lamp unit on)	Flashing (red) (Lamp unit off)
Problem	The surrounding temperature or the temperature inside the projector has become unusually high.	The temperature inside the projector has become dangerously high, or the temperature has suddenly changed.	The surrounding temperature or the temperature inside the projector has become dangerously high, causing the lamp unit to be automatically shut off.
Possible cause	<ul style="list-style-type: none"> • The ventilation holes may be covered. • The ambient temperature in the place of use may be too high. • The air filter may be blocked. 		
Remedy	<ul style="list-style-type: none"> • Uncover the ventilation holes. • Set up the projector in a place where the temperature is between 0 °C (32 °F) and 40 °C (104 °F) and the humidity is between 20% and 80% (with no condensation). [If you set the FAN CONTROL to "HIGH" (page 43), set up the projector in a place where the temperature is between 0 °C (32 °F) and 35 °C (95 °F) and the humidity is between 20% and 80% (with no condensation).] • Turn off the MAIN POWER switch by following the procedure on page 27, and then clean the air filter (refer to page 50). 		

LAMP indicator			
Indicator display	Illuminated (red)	Flashing (red)	
Problem	It is nearly time to replace the lamp unit.	An abnormality has been detected in the lamp circuit.	
Possible cause	<ul style="list-style-type: none"> • Does "REPLACE LAMP" appear on the screen after the projector is turned on? 	<ul style="list-style-type: none"> • The power may have been turned on straight away after it was turned off. 	<ul style="list-style-type: none"> • There may be an abnormality in the lamp circuit.
Remedy	<ul style="list-style-type: none"> • This occurs when the operation time for the lamp unit is nearing 1 800 hours. (when LAMP POWER has been set to "HIGH") Ask your dealer or an Authorised Service Centre to replace the lamp unit. 	<ul style="list-style-type: none"> • Wait for a while until the lamp unit cools down before turning the power back on again. 	<ul style="list-style-type: none"> • Turn off the MAIN POWER switch by following the procedure given on page 27, and then contact an Authorised Service Centre.

NOTE:

- Be sure to turn off the MAIN POWER switch by following the procedure given in "Turning off the power" on page 27 before carrying out any of the procedures in the "Remedy" column.
- If the main power turns off after the TEMP indicator starts flashing, it means that an abnormality has occurred. Please contact an Authorised Service Centre so that the necessary repairs can be made.

Cleaning and replacing the air filter

If the air filter becomes clogged with dust, the internal temperature of the projector will rise, the TEMP indicator will flash and the projector power will turn off. **The air filter should be cleaned every 100 hours of use,** depending on the location where the projector is being used.

Cleaning procedure

- ① **Turn off the MAIN POWER switch and disconnect the power cord plug from the wall outlet.**

Turn off the MAIN POWER switch according to the procedure given in "Turning off the power" on page 27 before disconnecting the plug from the wall outlet.

- ② **Gently turn the projector upside down.**

NOTE:

- Place the projector on top of a soft cloth so that it will not become scratched.

- ③ **Remove the air filter.**

Put your fingernails under the air filter and pull the air filter out of the projector.

- ④ **Clean the air filter.**

Use a vacuum cleaner to clean off any accumulated dust.

NOTE:

- Be careful not to let the air filter get sucked into the vacuum cleaner.

- ⑤ **Install the air filter.**

NOTE:

- Be sure to install the air filter cover before using the projector. If the projector is used without the air filter cover installed, dust and other foreign particles will be drawn into the projector, and malfunctions will result.
- If the dust cannot be removed by cleaning, it is time to replace the air filter. Please consult your dealer. Furthermore, if the lamp unit is being replaced, replace the air filter at this time also.

Replacing the lamp unit

Warning

When replacing the lamp, allow it to cool for at least one hour before handling it.

- The lamp cover gets very hot, and contact with it can cause burns.

Notes on replacing the lamp unit

- The light generating lamp is made of glass, so dropping it or allowing it to hit hard objects may cause it to burst. Be careful when handling the lamp.
- After having removed the old lamp, carelessly discarding it can cause the lamp to burst. Dispose of the lamp with the same care that would be taken with a fluorescent light.
- A Phillips screwdriver is necessary for removing the lamp unit. Make sure that your hands are not slippery when using the screwdriver.

NOTE:

- The projector is not supplied with a replacement lamp unit. Please ask your dealer for details. Lamp unit product no.: ET-LA730

CAUTION:

- Do not use any lamp unit other than the one with the product number indicated above.

Lamp unit replacement period

The lamp is a consumable product. Even when the full life of the bulb has not been exhausted, the brightness of the light will gradually decline. Therefore periodic replacement of the lamp is necessary.

The intended lamp replacement interval is 2 000 hours, but it is possible that the lamp may need to be replaced earlier due to variables such as a particular lamp's characteristics, usage conditions and the installation environment. Early preparation for lamp replacement is encouraged. A lamp that has exceeded 2 000 hours of use has a much greater chance of exploding. In order to prevent the lamp from exploding, the lamp will be automatically shut off when 2 000 hours of use have been reached.

NOTE:

- The usage hours explained above are for use when the HIGH setting has been selected for LAMP POWER in the OPTION menu. If the LOW setting is selected, the brightness of the lamp will be less and life of the lamp can be extended.
- While 2 000 hours is the intended replacement interval, it is not a period of time covered by warranty.

	On-screen display 	Lamp indicator warning light 
More than 1 800 hours	Displayed for 30 seconds. Pressing any button will clear the display.	The projector will enter Standby Mode and the red indicator lamp will illuminate.
More than 2 000 hours	This display cannot be cleared at all, no matter which button is pressed.	

Lamp unit replacement procedure

NOTE:

- If the lamp usage time has passed 2 000 hours (when LAMP POWER has been set to "HIGH"), the projector will switch to standby mode after approximately 10 minutes of operation. The steps ⑦ to ⑫ on the next page should thus be completed within 10 minutes.

- ① Turn off the MAIN POWER switch according to the procedure given in "Turning off the power" on page 27, and then disconnect the power cord plug from the wall outlet and check that the area around the lamp unit has cooled down.
- ② Use a Phillips screwdriver to turn the lamp unit cover fixing screws at the bottom of the projector, and then remove the lamp unit cover from the projector.

Lamp unit cover fixing screws

- ③ Use a Phillips screwdriver to loosen the two lamp unit fixing screws until the screws turn freely. Then hold the handle of the lamp unit and gently pull it out from the projector.

Lamp unit fixing screws

Handle

- ④ Insert the new lamp unit while making sure that the direction of insertion is correct, and then use a Phillips screwdriver to securely tighten the lamp unit fixing screws.

- ⑤ Install the lamp unit cover, and then use a Phillips screwdriver to securely tighten the lamp unit cover fixing screws.

NOTE:

- Be sure to install the lamp unit and the lamp unit cover securely. If they are not securely installed, it may cause the protection circuit to operate so that the power cannot be turned on.
- ⑥ Insert the power cord plug into the wall outlet and then press the MAIN POWER switch.

NOTE:

- If the POWER indicator on the projector does not illuminate red when the MAIN POWER switch is turned on, turn the MAIN POWER switch off again and check that the lamp unit and the lamp unit cover are securely installed. Then turn the MAIN POWER switch back on.
- ⑦ Press the POWER button so that a picture is projected onto the screen.
 - ⑧ Press the MENU button to display the MENU screen, and select "OPTION" by pressing the ◀ or ▶ buttons.

Lamp Time Reset

Power OFF

OK CANCEL

The "Lamp Time Reset" will be displayed.

- ⑪ Select "OK" by pressing the ◀ or ▶ buttons and press the ENTER button.

NOTE:

- If "CANCEL" is selected in step ⑪, the operation for resetting the lamp time will be cancelled.
- ⑫ Turn off the power.
This will reset the cumulative usage time for the lamp unit to zero.
Refer to steps ③ and ④ on page 27 for details on how to turn off the power.

About the RGB INPUT indicator

The RGB INPUT indicator can be used to check whether an RGB/YPbPr signal is being input. Refer to the table below for details.

RGB INPUT indicator status	Power supply status	
	Standby	On (projecting)
Illuminated	A signal is being input to either the RGB1 IN or RGB2 IN connector.	A signal is being input to the connector selected using the input select buttons.
Switched off	No signal is being input to either the RGB1 IN or RGB2 IN connector.	No signal is being input to the connector selected using the input select buttons.

About the automatic setup function

If you press the AUTO SETUP button, the items given in the table below will be set automatically. The setting details change according to the signal which is being input. Refer to the table below for details.

	Horizontal/ vertical position	Dot clock/ clock phase	Auto RGB input select	Automatic vertical keystone correction
VIDEO/S-VIDEO/ NETWORK/SD CARD				Yes
YPbPr			Yes	
Dot Clock frequency is 140 MHz or higher	Yes	No	Yes	
Signal other than above	Yes			

NOTE:

- If the edges of the projected picture are indistinct, or if a dark picture is being projected, the automatic setup processing may stop automatically before it is complete. If this happens, project a different picture and then press the AUTO SETUP button once more, or make the above adjustments manually.
- If you would like to make further adjustments to the picture, use the menu commands which are listed on page 28 and subsequent pages.

Before calling for service

Before calling for service, check the following points.

Problem	Possible cause
Power does not turn on.	<ul style="list-style-type: none"> • The power cord may not be connected. • The MAIN POWER switch is turned off. • The main power supply is not being supplied to the wall outlet. • TEMP indicator is illuminated or flashing. (Refer to page 48.) • LAMP indicator is illuminated or flashing. (Refer to page 49.) • The lamp unit cover has not been securely installed.
No picture appears.	<ul style="list-style-type: none"> • The video signal input source may not be connected properly. • The input selection setting may not be correct. (Refer to page 26.) • The BRIGHT adjustment setting may be at the minimum possible setting. (Refer to page 35.) • The shutter function may be in use. (Refer to page 42.)
The picture is fuzzy.	<ul style="list-style-type: none"> • The lens cover may still be attached to the lens. • The lens focus may not have been set correctly. (Refer to page 27.) • The projector may not be at the correct distance from the screen. (Refer to page 25.) • The lens may be dirty. • The projector may be tilted too much. (Refer to page 24.)
COLOR is too light or TINT is poor.	<ul style="list-style-type: none"> • COLOR or TINT adjustment may be incorrect. (Refer to page 35.) • The input source which is connected to the projector may not be adjusted correctly.
No sound can be heard.	<ul style="list-style-type: none"> • The audio signal source may not be connected properly. • The volume adjustment may be at the lowest possible setting. (Refer to pages 15 and 41.) • A cable may be connected to the AUDIO OUT jack. • The MUTE function may be active (page 41).

Problem	Possible cause
The remote control unit does not operate.	<ul style="list-style-type: none"> • The batteries may be weak. • The batteries may not be inserted correctly. (Refer to page 20.) • The remote control signal receptor on the projector may be obstructed. (Refer to page 20.) • The remote control unit may be out of the operation range. (Refer to page 20.)
The buttons on the projector do not function.	<ul style="list-style-type: none"> • The CONTROL KEY may be set to "OFF". (Refer to page 44) In order to set the CONTROL KEY to "ON" without using the remote control unit, keep holding down the ENTER button on the projector and press the MENU button for more than 2 seconds. It will then be turned ON.
The picture does not display correctly.	<ul style="list-style-type: none"> • The signal format (TV system) may not be set correctly. (Refer to page 35.) • There may be a problem with the video tape or other signal source. • A signal which is not compatible with the projector may be being input. (Refer to page 59.) • If you select SXGA60 or SXGA60+ type RGB signals, the pictures may not be projected correctly. If this happens, press the AUTO SETUP button.
Picture from computer does not appear.	<ul style="list-style-type: none"> • The cable may be too long. • The external video output for the laptop computer may not be set correctly. (You may be able to change the external output settings by pressing the [Fn]+[F3] or [Fn]+[F10] keys simultaneously. The actual method varies depending on the type of computer, so refer to the documentation provided with your computer for further details.) • If an RGB input indicator (refer to pages 14 and 54) is turned off, the video signals may not be output from the computer. • RGB2 SELECT in the OPTION menu is set to OUTPUT when the signals are input to RGB2 IN / RGB1 OUT connector. (Refer to page 42)

Specifications

Power supply:	100 V–240 V ~, 50 Hz/60 Hz
Power consumption:	300 W (During standby (when fan is stopped): Approx. 1.7 W) [When the WEB STANDBY is set to "ON": Approx. 43 W (page 44)]
Amps:	3.5 A–1.5 A
LCD panel:	
Panel size (diagonal):	0.9 type (22.86 mm)
Aspect ratio:	4:3 (16:9 compatible)
Display method:	3 transparent LCD panels (RGB)
Drive method:	Active matrix method
Pixels:	786 432 (1 024 x 768) x 3 panels
Lens:	Manual zoom (1 - 1.3) / focus lens F 1.7 - 2.2, f 28.7 mm - 36 mm
Lamp:	UHM lamp (220 W)
Luminosity:	2 200 lm/ANSI
Scanning frequency(for RGB signals):	
Horizontal scanning frequency:	31 kHz–91 kHz
Vertical scanning frequency:	50 Hz–85 Hz
Dot clock frequency:	Less than 140 MHz
YPbPr signals:	525i (480i), 625i, 525p (480p), 750p (720p), HDTV60 (1080i/60), HDTV50 (1080i/50)
Colour system:	7 (NTSC/NTSC 4.43/PAL/PAL-M/PAL-N/PAL60/SECAM)
Projection size:	1 016 mm - 7 620 mm (40" - 300")
Throw distance::	1.2 m - 11.8 m (3'11" - 38'8")
Optical axis shift:	9:1 (fixed)
Screen aspect ratio:	4:3
Installation:	Front/Rear/Ceiling/Desk (Menu selection method)
Speaker:	4 cm x 3 cm oval x 1
Max. useable volume output:	2 W (mono)
Connectors	
RGB IN/OUT:	Dual-line D-SUB HD 15-pin (female) (One-line is available for input and output)
During YPbPr input/output:	
Y:	1.0 V [p-p], 75 Ω
PB,PR :	0.7 V [p-p], 75 Ω
During RGB input/output:	
R.G.B.:	0.7 V [p-p], 75 Ω
G.SYNC:	1.0 V [p-p], 75 Ω
HD/SYNC:	TTL high impedance, automatic plus/minus polarity compatible
VD:	TTL high impedance, automatic plus/minus polarity compatible
AUDIO IN (for RGB):	Single-line 0.5 V [rms] M3 jack (Stereo)
